Professional summary

Experienced DevOps Engineer and Blockchain Developer with over eight years of expertise in building and deploying scalable infrastructures for startups and established companies. Proficient in server management, container orchestration, cloud services (AWS & GCP), Infrastructure as Code (Terraform), and CI/CD pipelines. A self-driven technologist with a passion for continuous learning and leading teams from inception to deployment.

Technical skills

- Blockchains: FLO, Bitcoin, Litecoin, Ethereum, Smart Contracts, Hardhat, Solidity
- DevOps: Docker, Kubernetes, k3s, Docker Swarm, Ansible, Terraform, GitOps, Github Actions CI/CD, Jenkins, Snyk, Vercel, ArgoCD, Helm
- Cloud Technologies: Amazon Web Services (AWS), Google Cloud Platform (GCP) with expertise in Compute Engine, Cloud Run, Cloud Storage, Cloud Functions, Cloud Build
- Programming/Scripting Languages: Python, Shell Scripting, JavaScript
- Monitoring and Logging: Netdata, Prometheus, Grafana
- Operating Systems: Linux, Ubuntu, Debian, Fedora, CentOS
- Server tools - NGINX, Supervisor, Systemd, ELB, EBS
- Web Technologies: Node.js, Python Flask
- Database Management: Firebase, BigQuery
- Cryptography : SHA256, Scrypt, Public-Private key generation, Merkle trees, Hashing
- Version Control: GitHub, GitLab, BitBucket

Work Experience

➤ Senior DevOps Engineer @ Dione Protocol, January 2025 - Present, Remote

- Infrastructure Ownership: Serving as the lead engineer handling the entire infrastructure, including the management of a network of 75+ blockchain validators.
- Greenfield DevOps: Established the company's internal DevOps department from the ground up, implementing standardised branching strategies and developer workflows.
- Multi-Cloud & Cost Optimization: Engineered a multi-cloud architecture by migrating high-load services from AWS to DigitalOcean, resulting in significant operational cost savings.
- Security & Compliance: Planning and leading the implementation of the **ISO 27001** roadmap to align infrastructure with international security standards.
- Secrets Management: Executed a comprehensive security audit and cleanup of legacy credentials, migrating to a secure, centralised secrets management system, a self hosted **Hashicorp Vault**.
- Automation: Developed and currently implementing automated backup pipelines for AWS resources using GitHub Actions to ensure data integrity and disaster recovery.

➤ DevOps Architect @ Buk Protocol (Freelance) , August 2024 - January 2025, Remote

- Designed and implemented scalable infrastructure for the [Chainwarz campaign](#) with **Docker compose** microservices, **Elastic Load Balancers** (ELB), and frontends on **WordPress** and **Vercel**.
- Reduced blockchain onboarding time by over **95%** (2-3 days to 1 hour) using **CI/CD pipelines** and **Terraform**.
- Deployed Solidity smart contracts using the Hardhat framework, ensuring smooth deployment and integration with blockchain networks.
- Configured **VPC Peering** with **Terraform**, linking main and blockchain-specific VPCs. Deployed **ELBs** to route traffic for services such as APIs and **Meilisearch**, ensuring availability and load distribution.
- Automated CI/CD pipelines using **Jenkins** to streamline Docker service deployment. Implemented **cronjob pipelines** for efficient Docker image cleanup, optimising storage and boosting service performance.
- Automated deployment of Docker microservices using **Ansible scripts** and **Vault** with templates for **Docker Compose** files and **.env files**. Enabled reusable configurations across blockchain environments by dynamically substituting variables.
- Managed **DNS** and **CDN** via **Cloudflare** and **AWS Route53**, ensuring efficient domain registration and traffic routing.

- Deployed **Uptime Kuma** for **monitoring**, with real-time alerts through Slack, email, and mobile notifications. Added custom API checks to ensure uptime and service reliability.
- Strengthened security by using **Snyk** to identify and remediate vulnerabilities, ensuring a robust and secure software ecosystem.

➤ **DevOps & Blockchain Developer @ RanchiMall**, July 2017 - December 2024, Remote

- **Docker Swarm & GitOps**: Deployed Docker Swarm to orchestrate the Flosight Block Explorer with zero downtime; established CI/CD pipelines using GitOps principles and self-hosted GitHub Actions runners to automate Docker builds.
- **Netdata & Prometheus**: Implemented Netdata and Prometheus monitoring with alert systems, webhooks, and callbacks to proactively minimize downtime across multiple environments.
- **Smart Contracts & NLP**: Developed a Smart Contract and Token system using a natural language processing engine to interpret FLO Blockchain data, simplifying blockchain interactions for end users.
- **PyPI & REST API**: Ported the pybtc Bitcoin library to pyflo, enabling FLO Blockchain integration, and published it on PyPI. Designed a REST API using Quart to expose Smart Contract data via RESTful standards, optimized for high concurrency.
- **SPV Wallet & Kivy**: Developed the first thin SPV wallet for the FLO Blockchain using Kivy and Python-for-Android, with non-custodial features including local encryption and storage of private keys.
- **Mentorship & Training**: Mentored and trained interns and team members in server infrastructure and monitoring, with many progressing to high-quality roles in the tech industry.

➤ **DevOps Engineer @ Climate Connect Digital (Freelance)** , June 2023 - Aug 2023, Remote

- **CI/CD** : Led the development of staging and production CI/CD pipelines for FNS-GCP-TECH. Utilized a wide range of Google Cloud Platform (GCP) services, including Cloud Build, Compute Engine, Cloud Run, Firebase, Cloud Functions, Dataproc (Apache Spark clusters), BigQuery for data migration, Cloud Storage, and Cloud Buckets, showcasing deep expertise in cloud infrastructure.
- **Complex Problem Solving & Integration**: Developed innovative solutions to complex technical challenges, seamlessly integrating **Google Compute Engine pipelines** and configuring **service account authentication** for **Cloud Build**. Demonstrated proficiency in **Linux** and **Google Cloud technologies**, enhancing system automation and security.
- **Automation & Scripting**: Leveraged advanced **Python**, **Bash scripting**, and **Linux** expertise to streamline development workflows, automating deployment processes and fostering a culture of continuous improvement within the team.
- **Documentation & Collaboration**: Created detailed project documentation with architectural diagrams using **mermaid.js** and **Markdown**, simplifying team onboarding. Collaborated with developers, managers, and testers in daily standups to ensure timely deliverables and alignment with technical goals.

Education

Savitribai Phule Pune University, Maharashtra

B.E in Computer Engineering, Graduated June 2017

First Class

Kendriya Vidhyalaya IIT Powai, Mumbai, Maharashtra

C.B.S.E Board , Graduated May 2012

Specialisation : Computer Science
